[Docket No. 201204–0325]

RIN 0648–BJ74

Magnuson-Stevens Act Provisions; Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; Pacific Coast Groundfish Fishery Management Plan; Amendment 29; 2021–22 Biennial Specifications and Management Measures

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule establishes the 2021–22 harvest specifications for groundfish taken in the U.S. exclusive economic zone off the coasts of Washington, Oregon, and California, consistent with the Magnuson-Stevens Fishery Conservation and Management Act and the Pacific Coast Groundfish Fishery Management Plan (PCGFMP).

This final rule revises the management measures that are intended to keep the total annual catch of each groundfish stock or stock complex within the annual catch limits. These measures are intended to help prevent overfishing, rebuild overfished stocks, achieve optimum yield, and ensure that management measures are based on the best scientific information available. Additionally, this final rule implements Amendment 29 to the PCGFMP, which designates shortbelly rockfish as an ecosystem component species, and changes the trawl and nontrawl allocations for blackgill rockfish within the southern slope complex south of 40°10′ North latitude (N. lat.), petrale sole, lingcod south of 40°10′ N lat., and widow rockfish.

DATES: This final rule is effective January 1, 2021.

SUPPLEMENTARY INFORMATION:**I. Harvest Specifications**

This final rule sets 2021–22 harvest specifications and management

measures for 127 of the 128 groundfish stocks which currently have annual catch limits (ACLs) or ACL contributions to stock complexes managed under the PCGFMP, except for Pacific whiting. Pacific whiting harvest specifications are established annually through a separate bilateral process with Canada. Under Amendment 29, shortbelly rockfish, which was managed with harvest specifications in the most recent biennium (2019–20), will no longer be managed with harvest specifications and will be instead designated as an ecosystem component species.

The overfishing limits (OFLs), acceptable biological catch (ABCs), and ACLs are based on the best available biological and socioeconomic data, including projected biomass trends, information on assumed distribution of stock biomass, and revised technical methods used to calculate stock biomass. See Tables 1a and 2a to Part 660, Subpart C in the regulatory text supporting this rule for the 2021–22 OFLs, ABCs, and ACLs for each stock or stock complex.

A detailed description of each stock and stock complex for which the Council establishes harvest specifications set through this rule can be found in the 2020 SAFE document posted on the Council’s website at <http://www.pcouncil.org/groundfish/safe-documents/>. A summary of how the 2021–22 harvest specifications were developed, including a description of off-the-top deductions for tribal, research, incidental, and experimental fisheries, was provided in the proposed rule and is not repeated here. Additional information on the development of these harvest specifications is also provided in the Analysis.

For most stocks, the Council recommended harvest specifications based on the default harvest control rule used in the prior biennium. The Council recommended deviating from the default harvest control rule for four stocks in 2021–2022. Table 1 presents a summary of the changes to the harvest control rules for these four stocks for the 2021–22 biennium. Each of these changes was discussed in the proposed rule and that discussion is not repeated here.
